

Compact Grout Plant

IC 1100/710

Key features

system

Pump performance

- Extremely compact mixing and injection system with central lifting point for easy transport and minimum installation time
- ► High productivity due to ergonomically positioned operating elements
- High reliability and low-maintenance operation with good accessibility to the wear parts
- Independent of pressure ratios, the suction stroke is always carried out at high velocity in order to flush the valves and to avoid clogging

Typical applications

- Grouting of anchors, soil nails, tension cables as well as for sleeve pipe, rock, and contact injections
- ► Preparation and pumping of bentonite suspensions for pipe jacking and microtunneling
